

Task – 28

```
# task - 28

from threading import *
from time import *
from datetime import date,datetime

class thread(Thread):
    def run(self):
        print(datetime.today())
        sleep(0.2)

class thread1(Thread):
    def run(self):
        print(datetime.today())
        sleep(2)

a = thread()
a.start()
b = thread()
b.start()
print("Number of active threads :",active_count())
```

output :-

```
2021-07-16 10:12:24.916153
2021-07-16 10:12:24.916153
Number of active threads : 3
```
